ESA's [Rosetta mission](#) was a marvel of modern science, successfully orbiting a spacecraft around a comet, and even landing a probe on the surface. Although the operational phase of this mission has ended, this legacy lives on in many forms. One of these is the Rosetta Science Operations Scheduling Legacy Workshop.

22 university students from 9 different ESA Member and Associated States participated in this first-of-its-kind workshop. Running in early October 2017, it was hosted at [ESA Academy's Training and Learning Centre](#), part of ESEC: the European space Security and Education Centre, in Belgium. The workshop gave students the opportunity to learn about science operations scheduling, with the Rosetta mission as a real-life example. The workshop was organised in coordination with experts from the Rosetta Science Ground Segment from the European
